# The Process

The sooner you call to book your consultation, the better!

If you are undergoing chemotherapy, it's best that we see your natural hair prior to chemo.

We will meet for an hour in a private room to discuss the style you desire, choose hair color, length and type of base construction.

You will need to have your physician give you a prescription for a cranial prosthesis. This will help if you plan on submitting to your medical insurance for coverage.

We will decide if a stock system (pre-made) or custom solution is most suitable for your needs.

Once the order is received, you will come back to the salon for the best part: cutting, styling and learning how to care for your new hair!

Call and schedule  
your **FREE** hair  
replacement  
consultation today!

# Synthetic v. Natural: Which is right for you?

## Synthetic fiber

### Pros:

1. Can be more cost effective.
2. Styles itself.
3. Low maintenance

### Cons:

1. Must stay away from heat
2. Cannot be custom colored ( what you see is what you get)
3. Can be itchy
4. Sometimes has too much shine, not natural looking

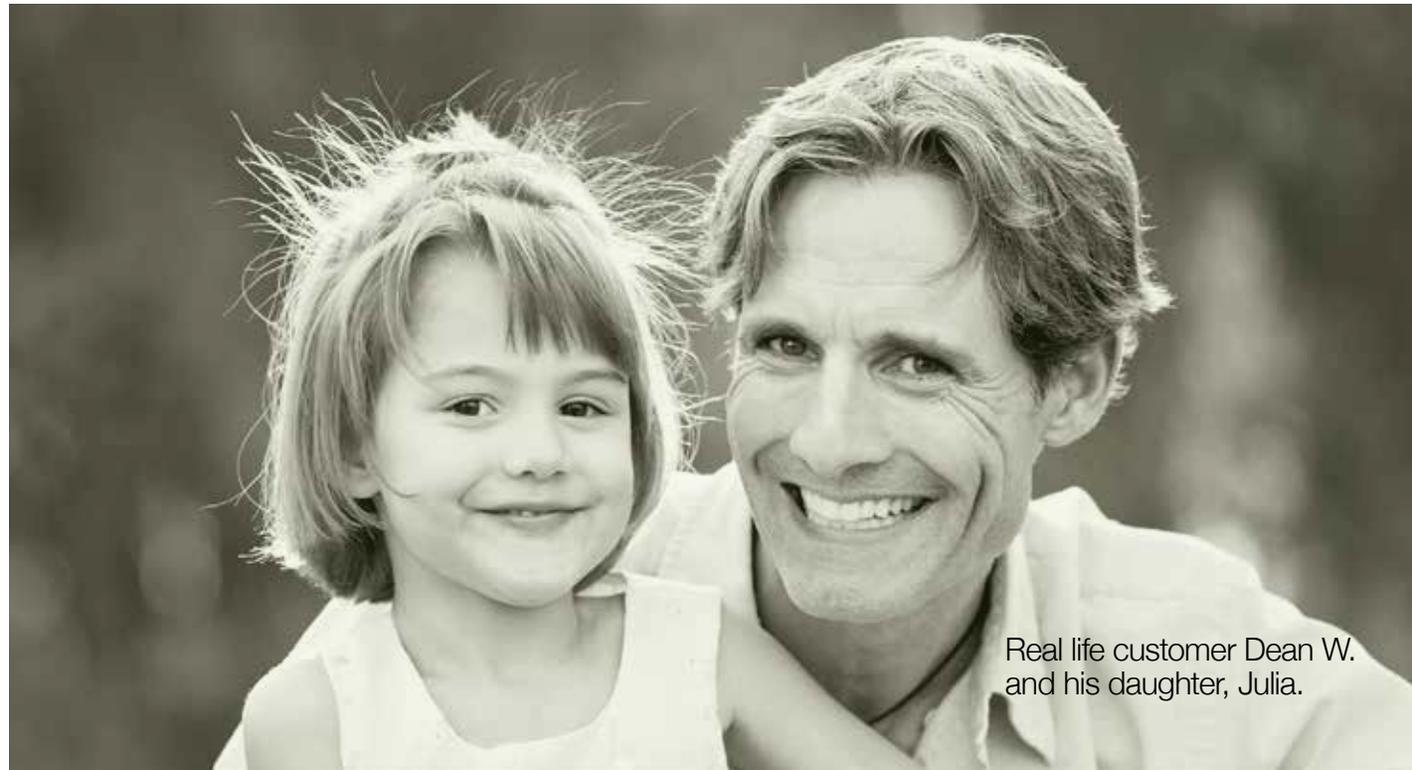

## Natural Hair

### Pros:

1. Can be custom colored
2. Softer feel
3. Moves more naturally
4. Can use heat tools (curling irons, blow dryers, flat irons) for more styling options

### Cons:

1. Requires more maintenance
2. Color fades and needs to be refreshed
3. requires more product to maintain (special shampoos and conditioners)
